

Fraud Investigation Report: Peyman Benharash

NPI: 1003000639

Specialty: Cardiac Surgery

Risk Level: Medium

Fraud Score: 0.4408

Executive Summary

■■ Investigator's Initial Note

Investigator's Note

This provider, a cardiac surgeon, has a moderate patient volume with low service utilization per beneficiary. The average cost per service is exceptionally low for this specialty, suggesting the services billed are likely consultations or minor follow-up care rather than surgical procedures.

Fraud Risk Analysis ReportTo: Payment Integrity Oversight Committee**From:** Senior Fraud Investigator**Date:** October 26, 2023**Subject:** Risk Analysis for Provider Peyman Benharash (NPI: 1003000639)*#### **Executive Summary****Provider Peyman Benharash (NPI: 1003000639) presents a significantly elevated fraud risk score of 0.4408, compared to a baseline of 0.1787. This deviation is primarily driven by a statistically significant overutilization of services per beneficiary and an unusually high cost per service relative to peers. These factors suggest a pattern of activity that warrants further investigation for potential fraud, waste, or abuse.### Key Risk Drivers****1. Services per Beneficiary Deviation (`spb\_z\_tanh`): This is the principal driver of the elevated risk score, contributing +0.1523. The provider's value of 0.67 indicates a service volume per beneficiary that is substantially higher than the peer group average. * Fraud Implication: This pattern is a strong indicator of potential overutilization (providing medically unnecessary services) or billing for services not rendered.****2. High Cost per Service (`cost\_per\_service`): This is the second-largest contributor to the risk score, adding +0.0799. The provider's value of 0.84 signifies that the average reimbursement amount for services rendered is significantly higher than the norm. * Fraud Implication: This may indicate upcoding, where the provider bills for more complex and expensive procedures than were actually performed, or a pattern of favoring high-cost branded treatments over more cost-effective alternatives.### Recommendation******Proceed to Audit.**

Key Findings

Investigator: Investigator's Note

This provider, a cardiac surgeon, has a moderate patient volume with low service utilization per beneficiary. The average cost per service is exceptionally low for this specialty, suggesting the services billed are likely consultations or minor follow-up care rather than surgical procedures.

Subject: Risk Analysis for Provider Peyman Benharash (NPI: 1003000639)

Executive Summary

Provider Peyman Benharash (NPI: 1003000639) presents a significantly elevated fraud risk score of 0.4408, compared to a baseline of 0.1787. This deviation is primarily driven by a statistically significant overutilization of services per beneficiary and an unusually high cost per service relative to peers. These factors suggest a pattern of activity that warrants further investigation for potential fraud, waste, or abuse.

Key Risk Drivers

1. **Services per Beneficiary Deviation (`spb\_z\_tanh`):** This is the principal driver of the elevated risk score, contributing +0.1523. The provider's value of 0.67 indicates a service volume per beneficiary that is substantially higher than the peer group average.

* **Fraud Implication:** This pattern is a strong indicator of potential **overutilization** (providing medically unnecessary services) or **billing for services not rendered**.

2. **High Cost per Service (`cost\_per\_service`):** This is the second-largest contributor to the risk score, adding +0.0799. The provider's value of 0.84 signifies that the average reimbursement amount for services rendered is significantly higher than the norm.

* **Fraud Implication:** This may indicate **upcoding**, where the provider bills for more complex and expensive procedures than were actually performed, or a pattern of favoring high-cost branded treatments over more cost-effective alternatives.
