

Fraud Investigation Report: Vinod Trivedi

NPI: 1003001645

Specialty: Infectious Disease

Risk Level: Medium

Fraud Score: 0.6638

Executive Summary

■■ Investigator's Initial Note

Investigator's Note

Provider Vinod Trivedi is an Infectious Disease specialist with a high beneficiary count of 666. The primary red flag is an unusually high average cost per service of \$613.84, which is more than three times the established threshold.

TO: Payment Integrity Oversight Committee**FROM:** Senior Fraud Investigator**DATE:** October 26, 2023**SUBJECT:** Fraud Risk Analysis: Provider Vinod Trivedi (NPI: 1003001645)#### Executive SummaryThe provider's calculated fraud risk score of 0.6638 significantly exceeds the baseline risk score of 0.2363. This elevation is driven almost entirely by an anomalously high cost per service metric. The data suggests a high probability of improper billing practices that require further scrutiny.#### Key Risk DriversThe elevated risk score is primarily attributable to the following factors:1. **Cost Per Service:** * **Provider Value:** 6.94 * **Impact on Score:** +0.4388 * **Implication:** This feature is the single largest contributor to the high risk score. A cost per service this far above the norm is a strong indicator of potential upcoding (billing for more complex and expensive services than were actually provided) or billing for medically unnecessary services.2. **Services Per Beneficiary (spb_z_tanh):** * **Provider Value:** 0.06 * **Impact on Score:** +0.0080 * **Implication:** This value indicates a slightly higher-than-average number of services provided per beneficiary compared to peers. While a minor contributor to the score, when viewed in conjunction with the extremely high cost per service, it may reinforce a pattern of overutilization.#### RecommendationProceed to Audit.

Key Findings

Investigator: Investigator's Note

Provider Vinod Trivedi is an Infectious Disease specialist with a high beneficiary count of 666. The primary red flag is an unusually high average cost per service of \$613.84, which is more than three times the established threshold.

Executive Summary

The provider's calculated fraud risk score of 0.6638 significantly exceeds the baseline risk score of 0.2363. This elevation is driven almost entirely by an anomalously high cost per service metric. The

data suggests a high probability of improper billing practices that require further scrutiny.

Key Risk Drivers

The elevated risk score is primarily attributable to the following factors:

1. Cost Per Service:

* **Provider Value:** 6.94

* **Impact on Score:** +0.4388

* **Implication:** This feature is the single largest contributor to the high risk score. A cost per service this far above the norm is a strong indicator of potential upcoding (billing for more complex and expensive services than were actually provided) or billing for medically unnecessary services.

2. Services Per Beneficiary (spb_z_tanh):

* **Provider Value:** 0.06

* **Impact on Score:** +0.0080

* **Implication:** This value indicates a slightly higher-than-average number of services provided per beneficiary compared to peers. While a minor contributor to the score, when viewed in conjunction with the extremely high cost per service, it may reinforce a pattern of overutilization.

Recommendation

Proceed to Audit.
